

This is an application for the grading distribution of three classes. You control the sliders to get the number of points per category. Depending on the numbers per each slider out of 100 total points, you get a letter grade. Greater than or equal to 90 is an A, while less than 60 is an F. You can move the sliders at any time, and the grade number and letter will automatically update. If the grade is 90 or above, a picture with the word congratulations will appear on the bottom. The image will disappear if the grade is less than 90. For example, if you have 91 points, that is an A, but if you move one of the sliders to the left by two points, your grade will be an 89 and displayed as the letter B and the image will disappear. To choose the class, you click on one of the icons with the corresponding name at the bottom. Pictures below.
